Gastrulation

Epiblast forms 3 germ layers:

- Ectoderm: epithelium (previous epiblast)
- Mesoderm: mesenchymal layer (embryonic connective tissue)
 - Endoderm: epithelium

Hypoblast:

- replaced by definitive endoderm

End product gastrulation:

Trilaminar embryo

Ectoderm (*Neural crest*)

brain, spinal cord, eyes, *peripheral nervous system*
epidermis of skin and associated structures,
melanocytes, cranial connective tissues (dermis)

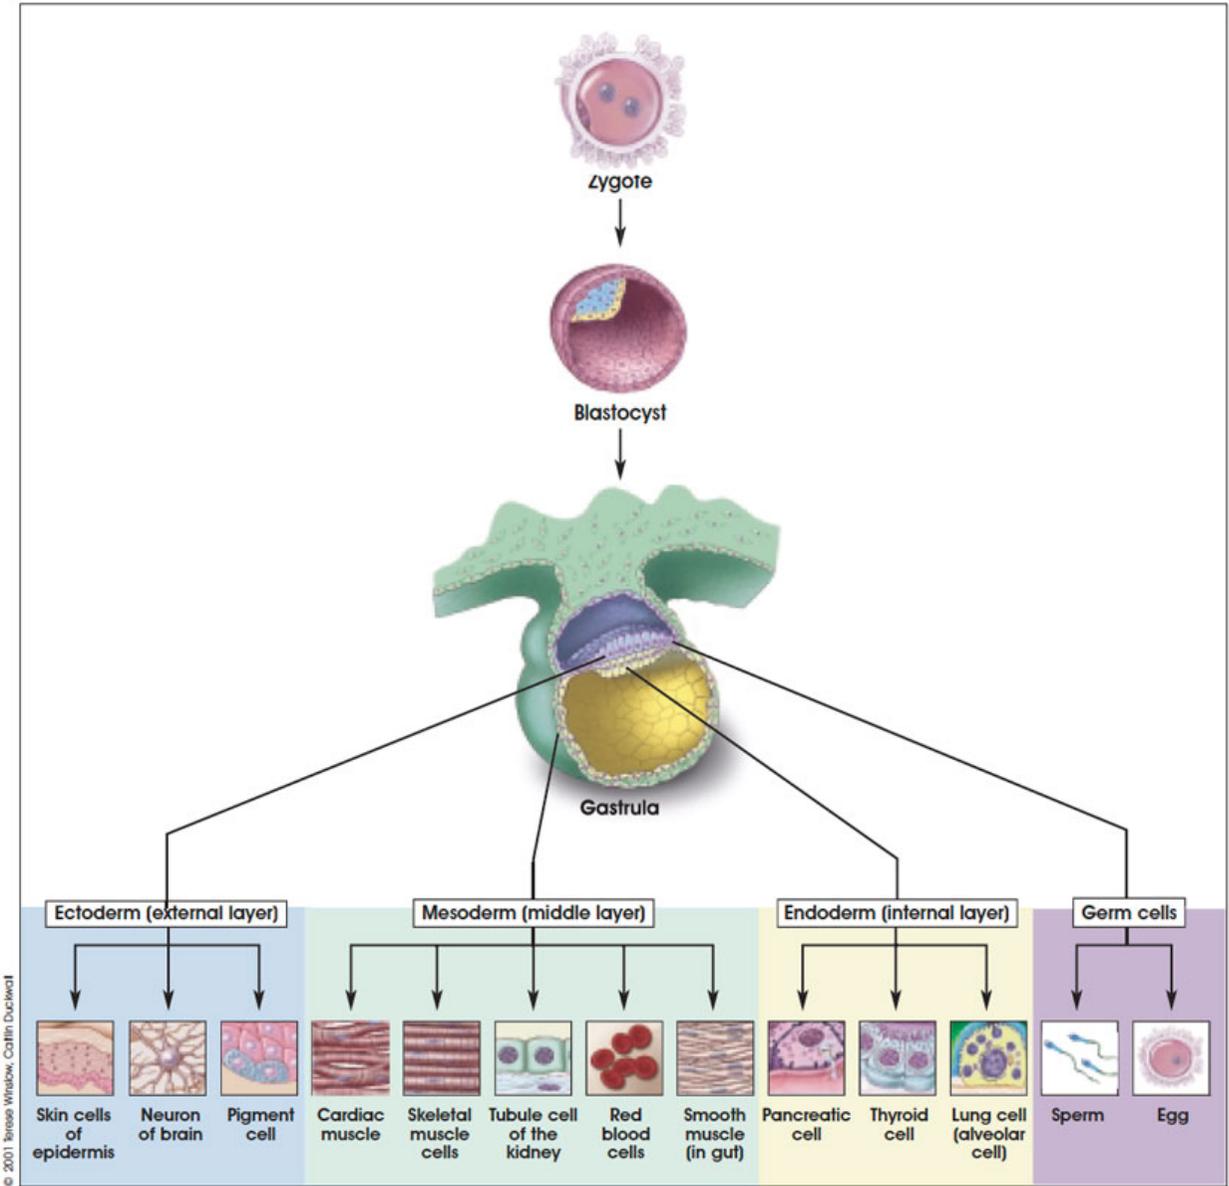

Mesoderm

musculo-skeletal system
limbs
connective tissue of skin and organs
kidneys, heart, blood cells

Endoderm

epithelial linings of gastrointestinal and respiratory tracts

Embryonic development:

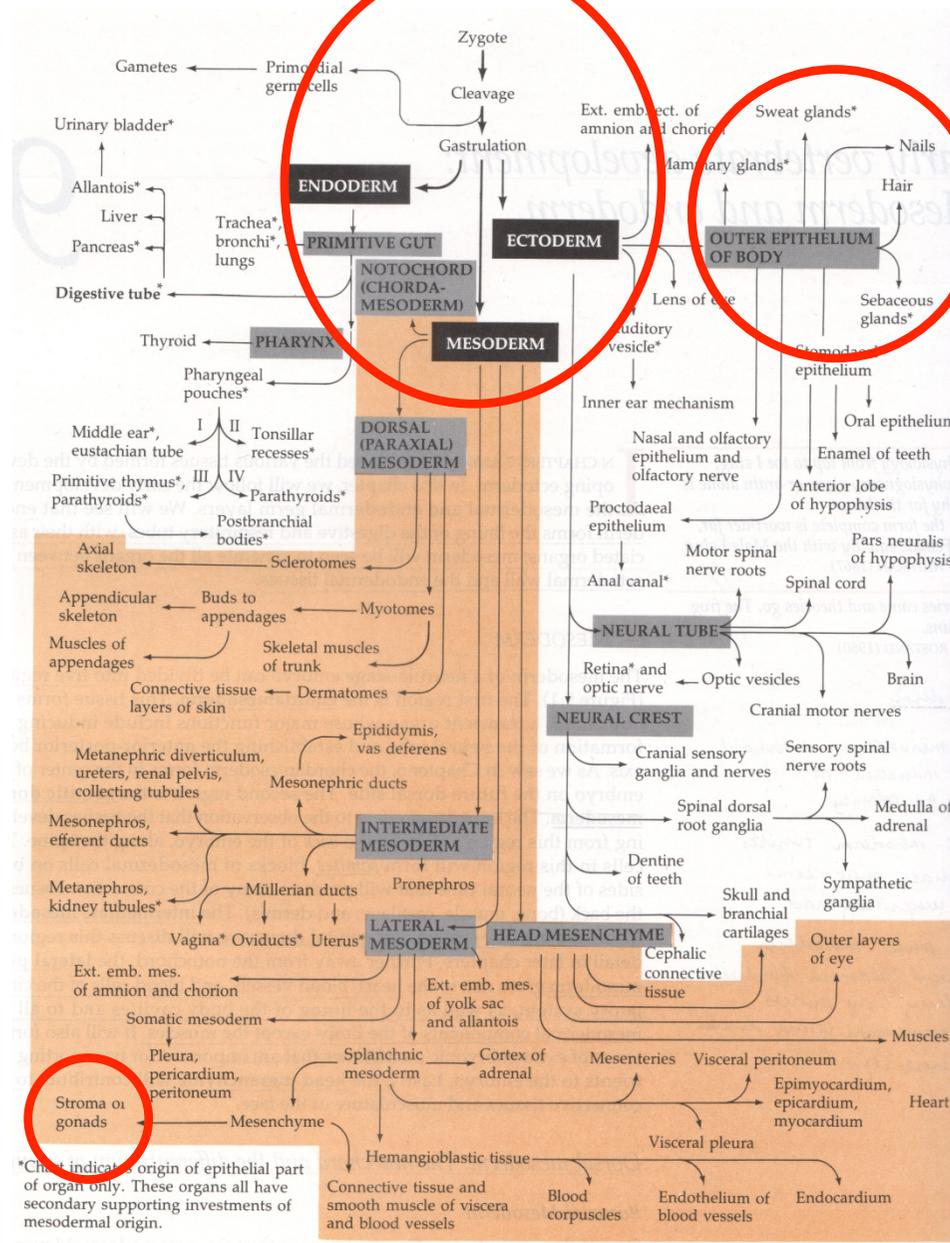

3 weeks

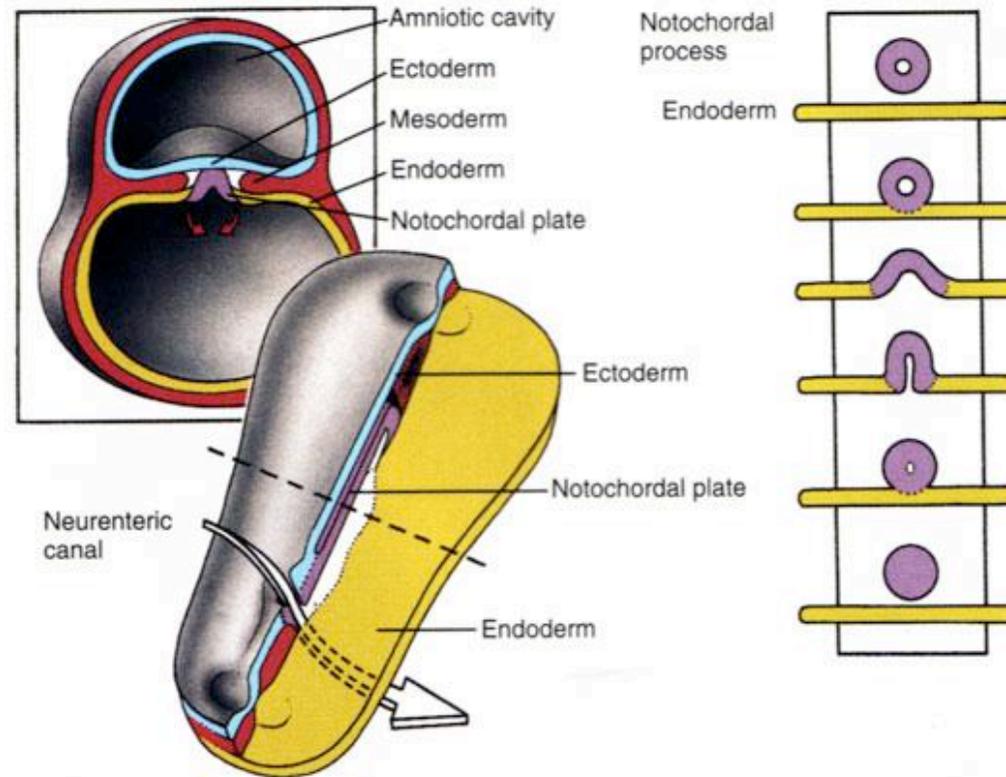

37 weeks
